

Lecorpio Annuity Management

Key Features

Advanced analytics

- Gain insight into portfolio costs, growth, and processing times by geography, patent family and business unit.

Configurable workflow

- Ensure full consensus is achieved before final decisions to abandon are made.

Granular user rights management

- Grant full access, read-only or no access to records and specific fields based upon each user.

Easy-to-use financial reporting

- Reconcile payments and access full account history, balances and monthly invoices.

Full transparency

- Gain insight into all fees, activity and decisions taken.
- Data-driven decisions access rich data to inform where and what to renew.

Control

- Accurately forecast the impact of renewals on spending, portfolio size, and geographical coverage.

Bringing unprecedented transparency and control to patent and trademark renewals

For IP-focused companies, managing the patent and trademark renewal process has become increasingly complex. Important decisions about where and what to renew must be balanced against the need for innovation and new filing expenses. Without data-driven analysis, companies are often forced to make important value and cost decisions blindly, without understanding the full impact of their decisions now, and into the future.

With Lecorpio Annuity Management, companies can leverage powerful reporting and analytics to make informed pruning decisions so that patent and family value, history, and renewal fees can be considered before each patent is renewed or let go. And by partnering with IPAN and other leading payment providers, Lecorpio remains focused on providing industry-leading reporting, analytics and technology to drive better decisions and streamline processes.

With Lecorpio, manage the entire patent and trademark lifecycle, including payments for annuities and renewals using a single platform. Benefit from unprecedented efficiency and transparency and leverage sophisticated reporting and analytics. Make informed decisions about IP spend and portfolio management and understand their impacts to budgets and coverage.

Leverage robust reporting and analytics

With access to easy-to-understand annuity growth, efficiency, and abandonment reporting, gain a comprehensive understanding of the current state of your patent portfolio to enable data-driven decisions. For example, compare annual patent spending and savings to confirm that they align with corporate objectives. Or gain insight into spending by geography, product lines or cost center.

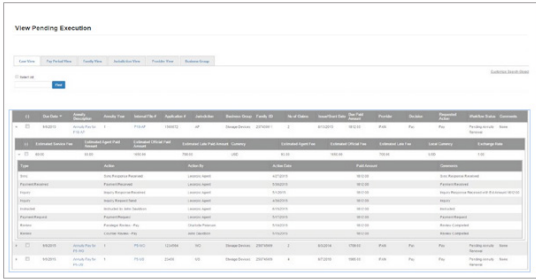

Graphical Reporting and Analytics

Streamline and Document Approval Processes

The Lecorpio interface provides robust case management and the ability to correct, approve or reject annuity payments in batch. All patents under management can be set to auto-pay, with workflow management to drive complex reviews across the organization. Required approvers can be configured to provide responses via Outlook, without interruption to daily workflow processes. All actions taken within the portal and responses provided outside the portal are logged for future reference, so there is never any question regarding how decisions were made.

Gain insight and contain costs

Lecorpio Annuity Management provides full transparency into all annuity fees charged including service fees, agent fees, official fees and any miscellaneous fees, or exchange rate fees charged. Utilize what-if analysis to understand the financial impact of abandoning or divesting patents. Forecast spending based upon different scenarios to ensure necessary budget for filing and prosecution in future years.

Easy-to-use management interface

Ensure data integrity

Unlike others, Lecorpio also audits the entire annuity payment process to ensure data integrity so that information provided within the Lecorpio portal matches the authoritative record. Information validated includes application number, jurisdiction, annuity year, due date and renewal fee.

About Lecorpio

Founded in 2005, Lecorpio is headquartered in Fremont, CA. The company currently counts 5 of the top 20 US patent filers as clients, and 8 of the top 10 IP law firms as users. With a focus on providing the highest levels of security, service and support, Lecorpio was named Market Leader by Hyperion Research.
